

Constant Can Weight (CCW) is a Nussbaum patented technology which reduces the weight variation of cans within a production batch. Through Nussbaum's CCW process the variation of the weight of the empty aluminium cans may be reduced to ± 0.5 grams within the same production batch. Each batch is accompanied by a weighing certificate, indicating the minimum and maximum weight, as well as the average tare-weight.

Customer benefits:

- Saves time and money and increases your productivity
- Less adjustments of filling volume required
- Reduction of rejected products, that do not meet fill-weight tolerances
- Reduction of hazardous waste and costs for handling and disposal
- Sustainable solution and improvement of your carbon footprint
- Validated process
- Certified tare-weight for each batch
- 100% control with electronic weighing protocol
- Strict weight-tolerances on large filling runs
- Process based on GMP rules and ISO 15378 (primary packaging materials for medicinal products)

Good to know:

- Available from June 2021
- Can formats: diameter 50mm (diameter 35mm coming soon)
- For other formats and specific requests feel free to contact us

Please forward to: Purchasing, Production and Quality Department.
